Invention: MEDIWATCH RE: Disclosure Document No. 507177

SPECIFICATION: MEDIWATCH is a watch combined with a medication pill box all in one. This watch has an alarm system that can be set for three or four different time alarms. These alarms will offer the choice of setting each alarm to sound off with:

1. regular alarm buzzing or ringing
2. voice alarm with the voice message "Time to take your medication."
3. vibration - no audio alarm

The watch face will be in regular numbers (big face) or the watch face can have Roman Numerals, providing the consumer with a choice.

BACKGROUND OF INVENTION: Being a disabled person, as well as having to be a care giver to my disabled mother for seven years, I realized that it was always a problem remembering to take my medication or administer my mother's medication on time. Therefore, there was very often missed medication doses.

Wearing this **MEDIWATCH** will eliminate the worry of missed medication doses because an alarm will remind you when it is time to take your medicine, so you never have to miss a medication dose. Since it is also a **PILL BOX** in addition to an alarm watch, it also eliminates the need to carry medication bottles, or a separate medication container that can get misplaced.

In addition the back of the **MEDIWATCH** serves as a medical alert bracelet, with important medical information engraved on the back of the watch.

MEDIWATCH:

DETAILED DESCRIPTION OF THE INVENTION:

The MEDIWATCH will be a watch, with the face of the watch on a hinge lock which when opened is a pill box. There will be three or four compartments, which will store one day's medication. This is for pills only, no liquid.

Depending on the number of compartments, there will be one up to four alarms which can be set separately. So throughout the day there will be an alarm letting you know when it is time to take your medication. Each compartment will be numbered to coincide with the alarm.

Inside the lid of the MEDIWATCH will be a removable disc on which the patient can list the medications inside the MEDIWATCH. Any emergency personnel will automatically have available to them the patients medications. The MEDIWATCH will include six medication list discs. Extra discs will be available.

The outside back of the watch, will be engraved with important medical information.

1. Patient's name
2. Patient's blood type
3. Patient's drug allergies
4. Patient's medical condition, disease or illness

EXAMPLE

JOHN DOE

AB+

D.A. SULFA

ASTHMA, DIABETES

The watch will be available in three styles.

1. Wristwatch
2. Pocket watch on a chain
3. Neck watch on a chain

Never again will the patient have to fumble with medicine bottles, lost or misplaced pill boxes and most important, never again will the patient forget or miss taking his/her medication at the scheduled time.

The MEDIWATCH will be particularly beneficial for the elderly. It will also make it much more convenient to carry your medication on you. So many times I would prefer not carry a handbag, pocketbook, purse, but I am forced to do so just to carry my medications. The MEDIWATCH will allow you to carry a full day's medications with relief from the worry of watching the clock so that a medication dose is not forgotten or missed or taken later than scheduled. The MEDIWATCH POCKET WATCH will be perfect for men. They will no longer have to bulk their pockets with medication bottles.

The MEDIWATCH serves three functions.

- 1. It is an alarm watch**
- 2. It is a pill box**
- 3. It is a medical alert bracelet including a list of medications taken and important medical information about the wearer of the MEDIWATCH**

Medical personnel will be alerted to look for the MEDIWATCH, which will provide them with important medical information immediately.
